

S Jones Modular Buildings on track to serve the rail sector

S Jones Modular Buildings, part of S Jones Containers, has recently delivered a project for Norwich train station after becoming a member of the Railway Industry Supplier Qualification Scheme (RISQS) – joining over 4000 high quality audited suppliers.

Earlier this year, S Jones Modular Buildings delivered a modular site accommodation unit at Norwich train station which the team installed on site within one day. The 20ft by 9ft jackleg cabin was built with robust jack legs making it the ideal solution for the site's uneven surface, creating a level floor inside despite the rough ground it sits on. The unit was fully fitted out prior to delivery to include shelving, hooks, pinboard, heating, LED lighting and an outward opening lockable door.

Overseen by independent industry figures, the Railway Industry Supplier Qualification Scheme (RISQS) puts the focus on safety and supplier assurance through verified audits. By being accredited as a RISQS supplier, S Jones Modular Buildings has demonstrated it has the correct assurance in place to mitigate risk, comply with legal requirements, adhere to safety protocols and deliver quality assurance. With its RISQS accreditation in place, the company will be able to support various rail contracts all over the country by providing a range of modular solutions from storage units to site office and welfare facilities.

Simon Willis, Business Development Manager at S Jones Modular Buildings said: "We're perfectly positioned to support the UK rail industry from our strategically located base in the Midlands. We work closely with clients to design, manufacture and install quality modular buildings to suit the specific requirements of each project and support a number of different sectors in the process. Having the RISQS accreditation in place provides that additional level of assurance for our clients in the rail sector that we can deliver the space they need within key quality and safety criteria."
