

# Built-in Shelving

Built-in shelving in shipping containers enhances storage efficiency by maximising vertical space and therefore increasing capacity. Racking systems are designed to safely store items, with the added benefit of reducing health and safety risks by keeping hazardous materials like paints and chemicals off the floor.

Suitable for any container size, racking options can be customised with multiple bays to optimise your space the best. By choosing built-in racking with a new container, you can immediately utilise the full storage potential from day one, in contrast to our self-assembly options.

## Specification & Features

We offer built in racking in various specifications to accommodate your needs, however the most common product is below:

- Standard number of shelves - 3
- Safe Working Load - 400kg per shelf
- Height - 6ft 6in (internal of std container 7ft 9")
- Width - 6ft
- Depth - 2ft
